

SKF timing belts and kits

Flexibility and strength for the most demanding timing drives

We introduced the timing belt kit concept to the automotive aftermarket over 20 years ago and the range was later extended with the addition of the timing belt kit with water pump.

When performing a timing belt replacement, experts recommend replacing all the parts in the system, including the water pump, to avoid individual component failure and additional maintenance costs.

Product features and performance

- **OE quality materials and treatment:** withstand high temperatures and heavy loads, ensure low friction and quiet operation.
- **HSN (H-NBR) treated rubber reinforced with high tensile fibres (Kevlar):** provide extra strength and extend service life span from 120 000 to over 200 000 km.
- **PTFE coating where high pressure injection pump is driven by the timing belt:** ensuring extra strength and heat resistance.
- **Lower tolerances:** maintain good timing within the engine.
- **Stable valve timing:** assures a smoother and more powerful drive.

Timing belt kits:

- Kits include the correct belt for your application in trusted OE quality.
- High quality tensioners and idler pulleys.
- Nuts, bolts, screws and other fasteners where necessary.

Timing belt kits with water pump:

- Kits additionally include a premium water pump and gasket.
