# SKF specific boot kits

Embodying world-class technology to reduce contamination and maintain smooth operation

Boots retain grease and protect the CV-Joints from dirt and water ingress which can cause damage or erosion over time.

SKF CV-Joints are designed and manufactured to precise OE standards and provide a fast, safe and flexible vehicle repair every time. Excellent sealing capacity and protection to the CV-Joint means components last longer.
Kits come complete with correct clamps, grease and extra safety components.

## Product and performance features:

- **Latest models made from robust thermoplastic:** provide longer lasting protection.
- **OE quality material and dimensions:** ensure maximum performance for the vehicle at hand.
- **Extra safety metal components inside kits (nuts/bolts, circlips, spring clips, dashed springs etc.):** ensures old parts are not re-used which can compromise safety.
- **High quality molybdenum disulphide (MoS2) lithium based grease bags:** provide excellent lubrication, anti-corrosion qualities and tolerance to high loads and extreme temperatures.
