Dual compound fork seal kit for MTB

MTB fork seals are a vital protective part of the overall front suspension system, with a crucial impact on riding comfort and trouble-free operation in the harshest environments.

This completely redesigned fork seal – adding on to SKF's well established fork seals range that has already been available on the market for more than 10 years – consists of **newly developed rubber compounds and new geometries** for both the scraper lip and the sealing lip.

The co-molded combination of compounds, together with improved sealing lip properties, **offers enhanced followability on the shaft.** In addition, there is a new metal insert and an open wound spring on the dirt scraper lip, effectively preventing the ingress of contaminants.

Benefits of the dual compound fork seals are:

- Extended sealing capability
- Improved contamination exclusion
- Reliable protection of the interior fork mechanism
- Minimum friction for enhanced vehicle control

Our Dual Compound fork seal kits come along in a custom-made color style and are available in various dimensions for high-end MTB forks.
